

Procedure for the loan approval web for windows

1. Save the app.py and template.py file and Make sure your HTML templates (index.html and result.html) are in a folder named templates in the same directory as your app.py file.

2. Install Required Packages though command prompt: flask, pandas, sklearn and joblib.

In command prompt: `py -m pip install flask (or the required package)`

3. Then in command prompt using `cd` change the present directory to the directory where the python files are saved.

4. Then run the template.py file in command prompt: `python template`

5. Then run the app.py file in command prompt: `python app.py`

6. Then after running the app.py file Running on `http://127.0.0.1:5000` will be shown.

7. Copy `http://127.0.0.1:5000` and run this on the browser.

8. Then the website will be visible fill the inputs and press the predict loan approval icon.

9. After pressing the icon the output screen will be shown.
